Training Associate Agreement with UiPath - Developing market of companies with sales of less than 500 billion yen -

Focus Systems Corporation (based in Shinagawa, Tokyo; President: Keiichi Mori; "Focus Systems") has signed a Training Associate agreement with UiPath K.K. (based in Chiyoda, Tokyo; CEO: Koichi Hasegawa; "UiPath").

With this agreement, we are now able to provide official UiPath training. Accordingly, we will provide higher quality training to a wide range of users and promote a correct understanding and usage of UiPath products.

Moreover, we will not only continuously support users that participate in training in their in-house production but also actively approach companies that are considering the use of RPA*¹ in the future.

(*¹) Robotic Process Automation

A form of business process automation technology based on a concept called software robots or digital labor

■ Ever-increasing RPA demands

RPA is becoming ever more common and major companies are beginning to introduce it. Now it is shifting from its development and maintenance phase to usage expansion and in-house production phase. For companies that have already introduced UiPath, training is expected to be in high demand as increasing the number of employees who understand its usage and products is essential.

However, there lack the SIers*² to support companies considering the use of RPA. Currently, approaches in the market of companies with sales of less than 500 billion yen are lagging despite expected high demand.

(*²) Systems Integrator

A company that undertakes a variety of businesses and services, including software design, operation, and consulting

■ Approaches to companies with sales of less than 500 billion yen

As a UiPath official service partner, we have been so far in charge of its license sales, development and technological support in line with customer requests.

In addition to the above, as a Training Associate partner, we will expand the use of UiPath products and provide more customers with opportunities to find a foothold in RPA utilization by regularly holding training sessions by employees certified as "UiPath Intensive Program Trainers." Furthermore, we will approach not only users that participate in training but also new customers that are considering the introduction of RPA to develop new markets and contribute to project launch support and member training in in-house robot development.
