Focus Systems wins intra-mart Special Project Award 2022 for its achievements in projects delivered to government agencies and educational institutions

Focus Systems Corporation (based in Shinagawa, Tokyo; President: Keiichi Mori, "Focus Systems") has received the intra-mart Special Project Award 2022 from NTT DATA INTRAMART CORPORATION (based in Minato, Tokyo; President: Yoshihito Nakayama, "intra-mart").

intra-mart® is an integrated platform for web applications, adopted by more than 8,900 companies in Japan to improve their workflow. The business-oriented software and low-code development tools of intra-mart enable companies to optimize their entire operations.

NTT's intra-mart Special Project Award is given to partners who have implemented large-scale projects, introduced advanced solutions, and achieved significant sales performance for intra-mart. Focus Systems won the award as its activities conducted in FY2021 were highly regarded, including project orders received from government agencies, and proposals and contracts regarding the introduction of Accel-Mart (a cloud-based product) to educational institutions, as detailed below:

- (1) A ward office: Affiliation information and staff data shared among individual systems are now managed using a common platform.
- (2) An educational institution: Low-code development, which requires little knowledge of programming for development, is introduced to break away from paper-based operations.

After entering an agreement to be a development partner with intra-mart in 2004, Focus Systems went on to form a distributor agreement in 2008, beginning full-scale development of the intra-mart business. Since then, we have achieved success in many intra-mart-related projects. We are committed to building a solid track record with increased deals related to the Prime Market, and by winning the intra-mart Award 2021 for our activities in FY2020.

Encouraged by this award, we aim to continue meeting society's ever-changing needs and keep a close eye on customer issues, working to address each of those as we create new value.
